

Sprint 1
Jan 15 - Jan 20

Goal

Create design guideline
Set up project, connect
backend and database

Issues

Copy from previous project
Docker Image
Wireframes

Responsibilities

Jonas: copy entities from old
project. Setup java and spring
boot
Stian and Daniel: design
guideline

Sprint 2 Feb 17 - Feb 24	Sprint 3 March 13 - March 17	Sprint 4 May 1 - May 7
Merge with React and create landing page and shop page.	Improve home page, and add more pages	Finish security
Write unit tests for backend	finish all entities in database, initial security	Start deployment on server
	Product, Cart Product and Order	JWT Backend
Unit test for entities and relationships	Product relationship	Connect JWT backend to frontend
	Login page	
	Shopping Cart page	
Fredrik: Setup React and JavaScript	Daniel: Security JWT	Daniel: Finish security
Daniel og Fredrik: Home page and Shop page	Stian: Styling on pages	Daniel: Server deployment
Jonas: Unit tests for entities	Stian og Fredrik: Single product page	Jonas: Backend functionality for cart
	Jonas: Cart Product and Order Product	

Sprint 5.1 May 24 -May 25	Sprint 5.2 May 26 - May 30
Employ .env file for passwords	
Style all pages and finish functionality	Swagger doc, finish Postman test suite
Product categories	Improve shopping cart and order
Admin CRUD endpoints	Add documentation requirements
Postman tests	Video
create .env file	
change variables to link to .env file.	Create swagger doc
Push changes to server branch	Finish last endpoints in Postman
	Style all pages
	Create video
	Create readme
CORS-config on server	
Jonas og Daniel: env file support	Fredrik: improve shopping cart and login
Daniel: server (cors issues)	
Fredrik og Stian: login/register	Stian: HTTPS
styling	
Jonas: Postman tests	Daniel og Jonas: styling
All: general styling	Jonas: documentation, swagger and required documents
